

Consulting

Competence in Health Care Services

We focus on fostering economic development

Our consulting services focus on the following key points

- Optimization of process workflows for hospitals, medical billing management, medical reimbursement service centers as well as health insurance companies
- Re-organization of operating room workflows
- Organization of DRG training programs
- Introduction of DRG calculation models for industry, medical scientific societies and associations
- Development of risk structure adjustment schemes

We will also gladly support you in other service areas.

Our expert staff is committed to providing comprehensive consultation services ranging from quality and process management, DRG training and auditing services to innovative economical solutions in managing health care.

Enhance your potential

Process optimization and efficiency enhancement for hospitals, insurance companies and medical reimbursement services

While staff in the area of bill and audit management are often overburdened by their workloads, an increase in personnel may seem at first logical or productive. However, in the long run this may not prove to be the best approach. Taking this into account, we can leverage and enhance your process analyses and optimization by making documentation easier.

Our strength is showing you how to recognize potential shortcomings in the area of billing management for hospitals, clinics and medical insurance companies by offering you customized process models for eliminating weak points in your system.

We seek to engage our clients in order to improve processes that will reduce the occurrence of future errors.

DRG training

Case-based flat rates, diagnoses and procedure codes as well as guidelines for coding change regularly. Also, the fluctuation in personnel leads to an increase in demand for training. Here it is important that every 'specialty' department evaluates and clarifies their own main objectives in order to find out how to best leverage them.

We can support you in this process and also provide analyses for the quality of coding followed by a training program, which is tailored to your needs.

DRG calculations for hospitals, industry, medical societies and associations

The DRG system is a learning system. Some areas may need improvement for representing their clinical aspects. Professional associations, medical societies, hospitals and medical industry share a common interest, which is to ascertain that hospital reimbursements are appropriately distributed. In addition, a fast and correct implementation of new diagnostic and treatment methods into the revenue system should be provided.

We can help you establish new DRGs, DRG splits, endorsements, diagnosis and procedure codes and assist you with your DRG calculations.

Your benefits at a glance

- Process consultation by experts possessing extensive medical backgrounds
- DRG training customized according to your individual needs
- Support for DRG calculation by providing you with medical expertise and high-end medical information technology.
