

Lohmann & Birkner

Your experienced and competent partner in health care

The task of all those involved in health care is to provide effective and modern medical care. We offer service providers and health insurers solutions that allow these tasks to be managed successfully.

We are your competent partner for all questions concerning medical claims management, case management, science and research projects for medical associations, consulting on budgeting as well as strategy development.

Lohmann & Birkner stands for competence in the health care industry. Our professional team consists of doctors, nurses, social workers, social insurance specialists, health economists and IT specialists.

Lohmann & Birkner

Competent in Theory and Practice

As experienced consultants, service providers and software developers in the healthcare industry, we operate at the interface between service providers and insurance companies, the industry and associations.

Our interdisciplinary team combines theoretical knowledge and hands-on experience to purposefully and systematically provide expert services to the greatest benefit of our customers.

Quality and process management is just as much part of our service portfolio as is the development of databases and medical software for hospitals and health insurance companies.

Please contact us for all health care questions concerning:

- Medical care in hospitals and doctors' offices
- Scientific research
- Medical IT
- Quality and process management for hospitals
- Quality and process management for health insurance companies
- Hospital law and social legislation
- Accounting

**More efficiency through expert advice,
support services and appropriate
software solutions**

Software

The software solution Checkpoint DRG is the ideal tool for service providers and health insurance companies to audit claims and manage cases. Opt for transparency in managing cases, from data capture to invoice. Checkpoint FM lets you manage and process individual cases simply and effectively, while Checkpoint PEPP lets you settle claims for psychiatric and psychosomatic cases appropriately under the new flat-rate pay system PEPP. It also lets you identify the revenue differences from case statistics.

Checkpad MED is the contemporary medical record for mobile devices. You as a doctor always have all relevant patient data available on your iPhone or iPad.

Development of comprehensive disease registers

On behalf of medical associations, we create registers on rare diseases such as acromegaly, neuroendocrine gastrointestinal tumours, Cushing syndrome and periprosthetic fractures. As part of these projects, we develop the databases, collect the disease data and actively participate in the preparation and production of publications of professional associations.

Case management of psychiatric and psychosomatic cases

On behalf of insurance companies, we review and accompany in-patient and out-patient treatments of psychiatric and psychosomatic illnesses. In advising care providers and the insured, our goal is to ensure optimal medical and socio-therapeutic care.

DRG Audit

We review the cases using our medical expertise in accordance with statutory provisions and support the implementation of the necessary changes.

Consulting

Our employees have lots of business and medical experience and will help you with issues such as optimizing hospital processes, DRG training, DRG calculation for medical associations, budgeting and revenue distribution.

Intensive Case Management (ICM)

We provide care management services for those customers who are insured. We take a holistic view of the care situation across all sectors. Our goal is to ensure that patients are cared for optimally with an economical use of resources. With the introduction of the Health Fund in 2009 and the Morbi-RSA, optimal care is once more attractive.

Mobile Data Collection

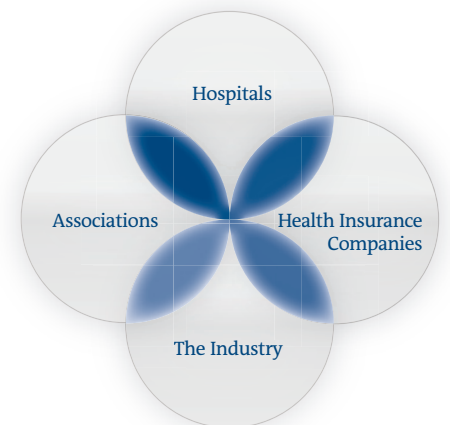

The possibility to provide central information instantly and easily on mobile devices anywhere, to supplement the information locally, to collect additional data and then provide it in a timely manner for further processing, these are the main features of our factis product range. This is how we make the procedures and processes of our customers in social management and health care safe and efficient.
